Dear Terry,
Living with diabetes can be easier when you have a support system that's always looking out for your health. That's why Express Scripts, along with <your employer or health plan>, has introduced diabetes remote monitoring that's already covered under your benefit.

A new diabetes program
that comes with your own
diabetes support team

Diabetes remote monitoring from Express Scripts

What it is

New **free glucose meter** syncs with an app on your smartphone

Logging results is simple and they're automatically stored in the app for easy reference

Results are shared with a support team of diabetes specialists, including a pharmacist

The specialized care from your diabetes support team helps you stay on track and avoid out-of-pocket costs that come from additional doctor visits

Remote monitoring shares results with your support team

It's not always easy to connect with your doctor in between visits, but your support team is always there to answer questions and help you get back on track

Test strips are covered under your benefit

There are no confusing changes in how you get your strips

How it helps

How you get started

1. Go to **es-diabetes.com** to enroll and enter your activation code:
DM-R3VM
2. Answer a few questions to set up your account
3. Receive your starter kit with a **free meter** and strips in about a week
4. Download the app using the instructions in your starter kit
5. Start testing as you normally do with your support team in your corner
